

YW

液下式排污泵

Liquid type Sewage Pumps

浙江扬子江泵业有限公司

ZHEJIANG YANGZIJIANG PUMP CO.,LTD.

一、产品概述

YW型无堵塞液下排污泵是在引进国内外先进技术的基础上,结合国内水泵的使用特点而研制成功的新一代泵类产品,具有节能效果显著、防缠绕、无堵塞等特点,在排送固体颗粒和长纤维垃圾方面,具有独特效果。

该系列泵采用独特叶轮结构和新型机械密封,能有效地输送含有固体物和化学纤维,叶轮与传统叶轮相比,该泵叶轮采用单流道式或双流道式,它类似于一截面大小相同的弯管,具有非常好的过流性,配以合理的蜗室,使得该泵具有效率高,过流效果好的特点,叶轮经动静平衡试验,使泵在运行中无振动。

该泵水力性能先进、成熟,产品经测试各项性能指标均达到有关标准规定,产品投放市场后以其独特的功效,可靠的性能,稳定的质量受到广大用户的欢迎和好评。

二、产品特点

1、采用大流道抗堵塞水力部件设计,大大提高污物通过能力,能有效地通过泵口径的5倍纤维物质和直径为泵口径约50%的固体颗粒。

2、设计合理,配套电机合理,效率高,节能效果显著。

3、机械密封采用双道串联密封,材质为硬质耐磨碳化钨,具有耐用、耐磨等特点,可以使泵安全连续运行8000小时以上。

4、泵结构紧凑,体积小,移动方便,安装简单等特点。

5、可根据用户需要配备液位自动控制柜,根据所需液位变化,自动控制泵的起动与停止,不需专人看管,使用极为方便。

6、泵为立式结构,工作时泵体浸在液体中因而很容易起动,不存在排气抽空问题,同时具有无泄漏等特点,液下深度可达0.5~7米。

7、接轴结构先进可靠,泵与电机采用联轴器联接,泵轴尺寸精密,保证了泵平稳运行,留有足够的安全系数。

8、在使用扬程范围内保证电机运行不过载。

9、泵有单管安装和双管安装两种,支承件有圆盘和方盘安装。

OUTLINE

Model YW under-liquid type sewage pump is a new generation product successfully researched and designed, integrates foreign advanced technology with the trait of domestic pump. Featuring a remarkable effect of energy saving, guard against the winding, non-clogging and automatic control. Have a distinctive effect to discharge solid particle and long fibre rubbish.

This series pump adopts special impeller structure and new mechanical seal, can transport the solid medium and long fibre effectively. Compared with traditional impeller, this impeller adopts the single channel or double channel, which is similar to identical cross section elbow that has the same size, and have very good ability of circulation. It can run without vibration through balance test of the impeller when collocate with the rational volute room.

The pump has a lead mature waterpower performance, through test, all performance indexes comply with relative requirements. After put for market, it receives great welcome and good comment support for special efficiency, reliable performance, and steady quality.

FEATURES OF PRODUCT

1. Adopt large-channel anti-jamming impeller structure, improve filth through ability, can be effective to pass 5 times of fibre through the caliber, diameter of pump require about 50% diameter of solid medium.

2. Reasonable design, reasonable necessary motor, high efficiency, effective energy-saving.

3. Mechanical seal adopts the new-type hard quality and is able to bear the rotten carbonization tungsten material, featuring a durable and wearable, can make pump run more than 8000 hours in succession safely.

4. Whole structure compactness, small, the little volume, move conveniently install easily. It does not need to build the pump house, slipping into water can work, reduce the fabrication cost.

5. Can collocate the switch board of full-automatic safe protection based on the needs of user, protect the pump when leak water, leak electricity, overload and ultra warm definitely, improve security and dependability of the products.

6. The pump is vertical structure, it is easily to start, because pump body is under water, inexistence exhaust vacuum phenomena and has no leakage, and the underwater depth reach 5-7m.

7. Connected shaft structure is advanced and certain, the pump and motor choose clutch to make connect, the size of shaft is exactitude ensure the stable running.

8. Guarantee the motor do not overload within the range of the whole head.

9. Pump have single pipe and double pipe installation, backup piece have disk and square plate installation.

三、产品适用场合

- 1、工厂商业严重污染废水的排放。
- 2、城市污水处理厂排水系统。
- 3、住宅区的污水排水站。
- 4、人防系统排水站。
- 5、医院、宾馆的污水排放。
- 6、市政工程、建筑工地。
- 7、勘探、矿山配套附机。
- 8、农村沼气池农田灌溉。
- 9、自来水厂的给水装置。

APPLICABLE FIELDS

- 1、Factories and commercial zone have serious polluted water emissions.
- 2、Urban sewage treatment plant's drainage system.
- 3、Residential district sewage row of water station.
- 4、Civil air defense system row of water station.
- 5、Polluted water drainage of hospital and hotel.
- 6、Public work, construction site.
- 7、Assembly machines on exploration and mine
- 8、Countryside methane-generating pit, irrigation
- 9、The water supply equipment in water station.

四、泵使用条件

- 1、介质温度不超过60℃，重度为1~1.3Kg/dm³，PH值在5~9范围内。
- 2、一般情况下，泵必须在使用扬程范围内使用，保证电机不超载，如需在全扬程范围使用，应在订货时另行注明，以便厂家制造。
- 3、在运行过程泵电机电流不得超，过电机的额定电流。
- 4、如有特殊的温度、介质等要求，请在订货时注明输送介质的详细情况，以便厂家制造。

CONDITIONS OF USE

1. The medium temperature should not be over 60℃, density is 1.0~1.3 kg/dm³, PH value is within 5~9.
2. Pump has no an inner self-flowing circulation cooling system, the motor part outside liquid should not exceed its 1/2.
3. Generally, ensure the motor do not overload within the range of using head. If it is necessary to work under all head, please make a separate note in advance so as to manufacture.
4. If any special requirement on temperature and medium comes, please make a separate detailed note on transported medium in advance so as to manufacture.

五、型号意义 MODEL MEANIG

六、结构示意图 STRUCTURE DESCRIPTION

1	电机	Motor	8	支撑管	Sustaining tube	15	叶轮螺母	Impeller nut

九、型谱图 ATLAS OF STYLE

十、泵使用方法及注意事项

1. 泵使用前应仔细检查泵和电机有无损伤, 检查紧固件紧固情况。
2. 盘动泵检查有无磨擦声, 同时检查泵轴与电机轴同心度, 两联轴节外圆偏差数不超过0.5mm。
3. 接泵出液口之管路, 应另设支架, 不允许将其重量加于泵体上。
4. 水泵在无特殊情况必须配备全自动水泵控制柜, 切勿直接挂电网或使用闸刀开关来接通电流, 确保水泵正常运行。
5. 不得将水泵长期处于低扬程状态下运行(一般使用扬程不得低于额定扬程的60%), 最好能控制在建议使用扬程范围以内, 以防水泵因超载而烧坏电机。

十一、维护保养

1. 水泵应有专人管理与使用, 并定期检查水泵的电路和水泵工作是否正常。
2. 每次使用特别是用于较稠较粘的浆液后, 应将水泵放在清水中运转数分钟, 防止泵内留下沉积物, 保证水泵的清洁。
3. 在常规状态下, 泵每使用300~500小时后应加注或更换油室中机油(10~30#机油), 使机械密封保持良好的润滑状态, 提高机械密封的使用寿命。
4. 叶轮和泵体之间的密封环具有密封功能, 如密封环损坏将直接影响泵的性能, 必要时应更换。

APPLICATION AND NOTICE

1. Before working, should check carefully if any damage with the cable, if any looseness or fall-off with the fasteners, if any deformation or damage with pump during transport, storage and installation.
2. Hand pump check if there is stridulation, and concentricity of pump shaft with motor shaft, outside deviation on both coupling do not exceed 0.5mm.
3. The pipeline of outlet should install another bracket, cannot put on the pump body.
4. Generally, should assembly full-automatic control cabinet, do not switch directly through electric filter or switch blade, in order that pump run well.
5. 'Do not work under lower head for a long time (commonly the using head can not below rated head 60%). It's better work within the advised using head, in case the pump overload and motor burned.

MAINTENANCE

1. The pump needs special person to manage and use, check whether has a good insulation between winding and casing on schedule.
2. After working in a high viscosity liquid, should water pump for few minutes, preventing sediments store in the pump, ensure pump cleanliness.
3. Generally, after every 300-500 hours work should add or replace mechanical oil in oil house (oil No.: 10-30), keep mechanical seal lubricate, then enhance mechanical seal's life-span.
4. The seal ring between impeller and pump body has advantage on air-proof, once damaged will affect performance of pump directly, so replace when necessary.

十二、常见故障分析及其排除方法

故障现象	原因分析	排除方法
流量不足或不出水	1、叶轮旋转错误 2、阀门是否打开和完好 3、管道叶轮被堵 4、转速过低 5、扬程过高 6、抽送介质密度较大和精度较高 7、密封圈损坏(口环处)	1、调整叶轮旋转方向 2、检查、维修、排除 3、清理杂物 4、检查电器设备及电路 5、改泵或降低扬程 6、用水)中稀降低浓度和粘度 7、更换
运行不稳定或泵不能启动	1、叶轮不平衡 2、轴承损坏 3、缺相 4、叶轮卡住	1、送制造厂调换或校正 2、更换 3、检查电路进行修复 4、排除杂物
电流过大	1、工作电压低 2、管道叶轮受阻 3、使用扬程过低 4、抽送液体的高度或粘度较高	1、调整工作电压 2、清理管路叶轮结构 3、减少流量，提高扬程 4、改变或粘度
泵有杂音或振动	1、泵轴、电机轴不同心 2、介质中有气体 3、腐蚀使泵轴不平衡 4、传动装置处螺栓松动 5、泵轴弯曲	1、调整 2、降温或加压 3、更换 4、紧固 5、校直或更换

FAILURES ANALYSIS AND TROUBLESHOOTING

Failure	Cause analysis	Troubleshooting
Flow insufficient or no water out	1、Impeller moving wrong 2、Whether the valve open or good 3、Pipe and impeller blocked up 4、Too low rotating speed 5、Too high head 6、Too high concentration of the medium to be extracted 7、Oral ring damaged	1、Adjust impeller moving direction 2、Check, maintenance and eliminate 3、Get rid of foreign matters 4、Check the electric equipment and circuit 5、Change the pump and lower the head 6、Lower consistency with water 7、Replace
Instability running or unable to start	1、The impeller is not balance 2、The bearing damaged 3、Lack of phase 4、Impeller blocked	1、Deliver to exchange or adjustment 2、Replace 3、Check the pipeline and repair it 4、Get rid of sundries
Too heavy current	1、Low voltage 2、The pipeline and impeller blocked up 3、Too low using head 4、Too high density or viscosity of liquid extracted	1、Adjust voltage 2、Get rid of blocked matters 3、Reduce flow and enhance head 4、Change density and viscosity
Low insulation resistance	1、The electrical contraction of cable is leakage 2、Cable damaged 3、Mechanical seal worn out and water-leakage 4、Every O-seal ring is useless 5、The casing eroded by medium cause water-leakage	1、Tighten the clamp nut 2、Replace 3、Replace 4、Replace 5、Repair
